A strong **#password** is the first line of defense. Never reuse passwords and definitely don't put it on a sticky note on your computer monitor. **#cybersecurity**

YOU SAID YOU NEVER WRITE DOWN YOUR PASSWORD

THE LIE DETECTOR (AND THE POST-IT ON YOUR MONITOR) DETERMINED THAT WAS A LIE

Remember: public Wi-Fi is not always secure, and most hotspots don't encrypt your information. If possible, only visit sites with HTTPS encryption and don't access sensitive data when you're on public Wi-Fi.

#cybersecurity #informationsecurity #infosec #AustinPowers #groovybaby

When you see people connect to unencrypted public Wi-Fi networks:

A potential client has sent you a vendor security questionnaire longer than the last Harry Potter book. Ugh. And it's probably not the first one you've gotten this week.

Here are some tips for making vendor security questionnaires more manageable:

- ✅ Formalize your #cybersecurity program.
- ✅ Align your program with business goals.
- ✅ Build a common response repository.
- ✅ Pursue certification.

Learn more about managing (and surviving) vendor security questionnaires: <https://bit.ly/31vc3LC>

When you receive yet another vendor security questionnaire:
